Art Unit: 3744

DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-16 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of U.S. Patent No. 6,598,409 to Shyy et al., in view of U.S. Patent 6,148,635 to Beebe et al. Although the conflicting claims are not identical, they are not patentably distinct from each other because the device described and claimed is exactly the same in both cases. Shyy discloses applicant's basic inventive concept, a miniature vapor compression cycle thermal management device, including a dropwise condenser and ejector. The device includes a flexible compressor membrane serving as the compressor. The compressor can be stimulated electrostatically and drives refrigerant charge through a closed loop defined by interconnected compressor, condenser, expansion, and evaporator structures. The condenser includes a flexible condensing membrane for dropwise condensation and for propelling condensed droplets of refrigerant from a cooled condensing surface into an expansion chamber. The overall structure and size of the device is similar to microelectronic packages, and it may be combined to operate with similar devices in useful arrays. The device is substantially

as what the applicant claims, with the exception of describing the specific environment and situations where it might be used. Beebe shows these to be old in the cooling art (col 1, lines 30-42). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made from the teaching of Beebe to modify the system of Shyy, by using it in clothing cooling systems, for cooling of electronic circuitry, such as that used in a laptop PC, in order to increase device operating speed and permit higher component densities.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 6,741,469 to Monfarad, Ali Heydari

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Filip Zec whose telephone number is (703) 306-3446. The examiner can normally be reached on Monday through Friday, with the exception of every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on (703) 308-2597. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
